

Qi Dang

Vancouver, BC | (250) 891-2068 | qid14@outlook.com | <https://www.linkedin.com/in/qi-dang/>

Software Engineer

An innovative Cloud Software Engineer with over **3 years** of experience specializing in designing, building, maintaining, and optimizing **cloud-based applications** and **backend systems** across **AWS, Azure, and GCP**. Skilled in **software development, full stack engineering, cloud infrastructure, and automation**, delivering high-quality solutions using **Python, Node.js, Java, and React**. Proven track record in leading the development of automated **CI/CD** pipelines, integrating **cloud monitoring** and **logging** solutions, and streamlining deployment processes to enhance operational efficiency, reliability, and security. Experienced in **designing and implementing APIs**, leading **feature development**, and collaborating with **cross-functional** teams to deliver high-impact solutions. Key contributor to launching **large-scale distributed systems** like [HP Anyware for Windows 365](#) in partnership with Microsoft, ensuring scalable, reliable, and repeatable performance. Passionate about emerging **web** technologies, **DevOps** practices, and building ergonomic **APIs** to automate processes, improve system reliability, and deliver seamless user experiences while reducing operational overhead.

Key Skills

Software Development Life Cycle (SDLC) | Cloud Engineering | Web Technologies | Distributed Systems | Microservices Architecture | Infrastructure as Code (IaC) | DevOps | Agile | Project Management | Troubleshooting | Problem Solving

Technologies and Tools

- **Programming Languages:** Python, JavaScript, Java, Bash, PowerShell, SQL
- **Cloud Computing:**
 - AWS: IAM, VPC, EC2, S3, RDS, DynamoDB, CloudWatch, SES, WAF, ELB, Lambda, EKS
 - Microsoft Azure: IAM, Virtual Network, Virtual Machine, CosmosDB, App Service, App Gateway, Storage account, Key Vault, Azure Monitor, AKS
 - GCP: IAM, VPC, Compute Engine, Cloud Storage, Cloud Monitoring, GKE
- **Web Development:** React, Node.js, Express.js, Django, Flask, Spring Boot, Redux, Redis, HTML/CSS
- **Databases:** MongoDB, PostgreSQL, MySQL
- **DevOps & Automation:** Terraform, Ansible, Docker, Kubernetes, TeamCity, GitHub Actions, Jenkins
- **Event Streaming:** Kafka
- **Testing & Best Practices:**
 - Techniques: Unit Testing, Integration Testing, Test-Driven Development (TDD), Load Testing
 - Tools: unittest, pytest, JTest, Jest

Work Experiences

HP Inc, Vancouver, BC

January 2023 – December 2024

Cloud Software Engineer

- Key contributor to the launch of [HP Anyware for Windows 365](#), a joint HP/Microsoft project, collaborating with **cross-functional** teams to build **mission-critical** features and ensuring scalability and reliability.
- Developed customer-facing web applications using **Node.js** and **React**, leveraging **Docker** and **Azure** services to create elegant user experiences and intelligent orchestrations.
- Led **technical design** and implementation for key features, including **RESTful API** design, optimizing system algorithms to enhance processing efficiency by **30-70%** and improving production operation.
- Led **troubleshooting** and **incident management** by designing and implementing **logging** and **monitoring** solutions with **Azure Monitor**, which enhanced system observability and reduced debugging time by **50%**.

- Contributed to the cloud workload management by integrating **Microsoft Graph API**, implementing a batching mechanism that reduced API calls by up to **80%**, significantly improving data upload performance and resource efficiency.
- Developed and managed marketplace products on **AWS** and **GCP**, implemented automated **CI/CD** pipelines with **TeamCity** and **Ansible** to build cloud images, ensuring users had seamless access to the latest product versions.
- Established robust **rollback mechanisms** to quickly revert to previous versions in case of deployment errors, minimizing downtime and maintaining service reliability.
- Contributed to the **architecture, design, and testing** of various system components, ensuring reliability and scalability of the application.

HP Inc, Burnaby, BC

September 2021 – August 2022

Associate Software Developer

- Developed and maintained **Terraform, Bash, PowerShell, and Python** [cloud deployment scripts](#) to automate the process for customers to build the HP Anyware product (**SaaS**) environment on **AWS** and **GCP**.
- Integrated **cloud logging** and **monitoring** services to improve efficiency for troubleshooting and scaling on **AWS** and **GCP**, reducing log access time by **50%**.
- Participated in the full **SDLC** of open-source projects, improving secure remote access and streamlined workflows on **AWS** and **GCP**, reducing operational overhead by **30%**.
- Created robust interfaces for internal tools, enhancing developer efficiency through **automation** and **CI/CD pipelines**.
- Worked on incident management and troubleshooting for **Kubernetes** deployments, reducing downtime through effective issue resolution and enhancing system observability.

Intellyon Inc, Burnaby, BC

May 2021 – August 2021

Junior Backend Developer & Systems Engineer

- Designed and maintained backend systems using **Python** and **AWS**, focusing on **REST API** design and implementation to facilitate seamless data integration across services, while leveraging **Django** for creating durable, composable data models.
- Secured backend systems with customized **AWS Web Application Firewall (WAF)** that successfully rejected over **1,000** injection attempts and DDoS attacks, enhancing overall security and system resilience.
- Utilized **AWS Auto Scaling** and **Elastic Load Balancer (ELB)** to enhance application performance, reliability, and scalability, increasing backend capacity by **100%** and enabling automatic scaling to handle fluctuating traffic.
- Enhanced user experiences by integrating **Python OpenCV** for video processing and timeline generation.
- Implemented user notification system with **Python** and **AWS SES** to enhance user engagement and retention by delivering personalized email updates, resulting in a **25%** increase in user interaction with the platform.
- Participated in the design and management of a **PostgreSQL** database, ensuring reliable data handling for business needs.

Personal Project

E-Commerce Platform - <https://github.com/QI-D/Ecommerce-backend>

In Progress

- Developing a backend system for an e-commerce platform using **Java** and **Spring Boot**.
- Implemented **RESTful** APIs for user authentication, product management, and order processing.
- Designed a **MySQL** database schema to store and manage user, product, and order data efficiently.
- Integrated **Spring Security** for secure user authentication and role-based access control.
- Planned the architecture for future integration with a **React-based frontend** and deployment on **AWS**.

Education

Diploma, Computer Information Technology, With Distinction
British Columbia Institute of Technology, Vancouver, BC

2022
